## FIRST AID KIT

Students prepared the First Aid kit which enabled them to learn about the necessary things required for the first aid kit, and also learnt the way of implementing first aid according to the requirements. They not only made a model on First aid kit but also explained about the materials kept inside the first aid box and their uses.

## DEMONSTRATION OF FIRST AID KIT

Our students demonstrated the things which kept inside the first aid box and also explained what to be used , when to be used and how to be used during emergency time.

Students prepared first aid kit and explained the action to be taken for different critical situation to other classes, and learnt the importance of first aid.

AWRAENESS PROGRAM DURING PROJECT DAY

Our students explained about the symbol of first aid with the importance of first aid and also made different types of first aid kit during project day.

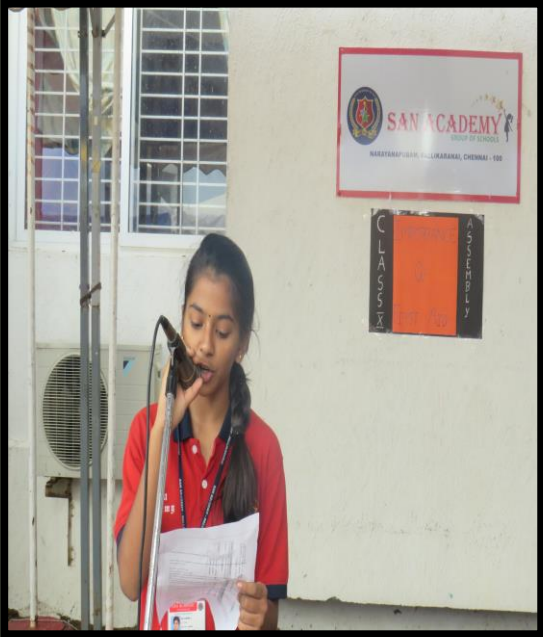

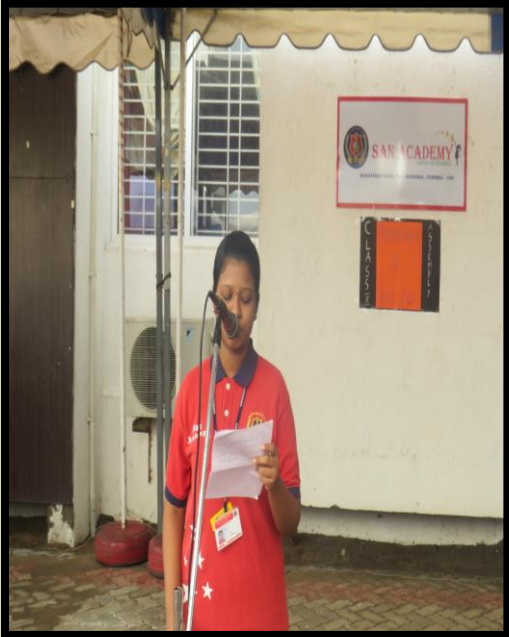

Home First Aid Kits Contents

Home first aid kits are usually used for treating these types of minor traumatic injuries.

1. Burns
2. Cuts
3. Abrasions (scrapes)
4. Stings
5. Splinters
6. Sprains

SAN ACADEMY, PALLKARANA TEAM - 193

## CONCLUSION

“It is reasonable to conclude that the ultimate goal of the first aid is neither to treat, nor to diagnose, but to stabilize the patient. The unique value of the first responder lies in their ability to eliminate the immediate threat to life or limb and to prepare the patient for a higher subsequent echelon of care. Therefore, it is vital for this nation to emphasize the funding and the training for the men and women who are the first on the scene.”
